

# Apollo / Saturn V

Instructions for Service and Command Modules

## COMMAND AND SERVICE MODULE

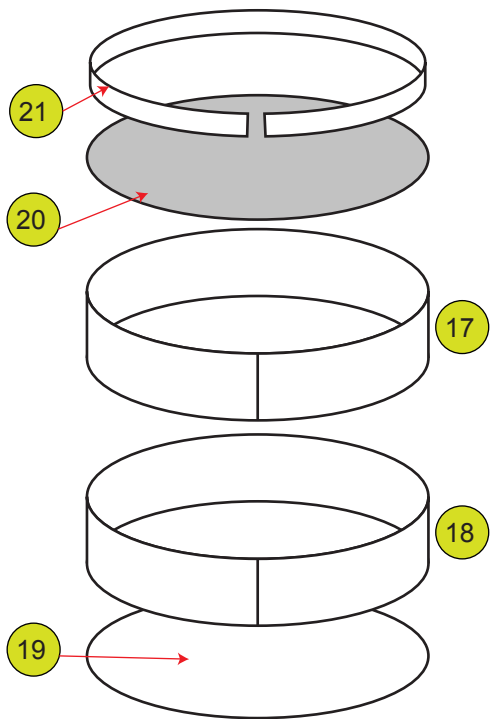

Add detail Parts #2 to #15 as indicated on part #1

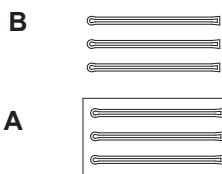

The Heat Shield is made from a series of concentric circles (rings).

The best way to ensure that the rings will fit together without gaps, is to start by building the outer ring first (22), then build the inner rings and install them progressively toward the center .

As the glue dries, the heat shield should be placed with the top edge of the outer ring touching a flat surface, such as a table top. This will help stabilize the shape of the heat shield, and keep it round as possible. Finish off with the 2mm card dish part 23. Attach to base of the Command Module

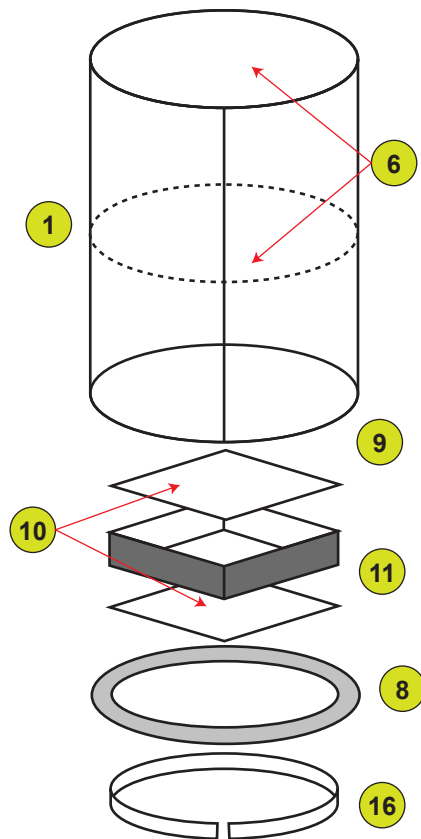

Glue #17 onto #18

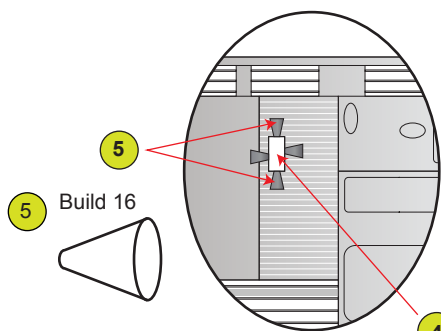

Glue #B onto #A x 8

Glue #C, #D, #E, #F, #G, #H, #I, #J and #K onto #18 as indicated

Glue part #3 onto part #2 and then glue onto part #1 as indicated
